Sentiment Score

The Sentiment Score displayed on the Thematic Athens platform is an indicator of emotional trends, designed to evaluate and quantify the emotional stance expressed through data such as user reviews or comments.

Definition and Purpose

The Sentiment Score refers to a numerical representation of emotional disposition, categorizing it as positive, negative, or neutral. It aims to provide an objective metric for assessing the overall perception of the audience regarding products, services, or experiences.

Calculation Methodology

The score is calculated using advanced Natural Language Processing (NLP) techniques and machine learning algorithms, which:

- **Analyze textual data to identify positive, negative, or neutral elements.**
- **Assign numerical values, typically on a scale, reflecting the overall emotional outcome:**
 - **Positive values:** Indicate a prevailing positive sentiment (e.g., high satisfaction or approval).
 - **Negative values:** Represent dissatisfaction or criticism.
 - **Neutral values:** Suggest balanced or non-intense emotional reactions.

Utility and Application

The Sentiment Score provides valuable insights for:

- **Qualitative Assessment:** Helps in understanding customer experiences.
- **Informed Decision-Making:** Supports the improvement of products, services, or strategies.
- **Marketing Strategy:** Identifies audience reactions, enabling targeted enhancement of campaigns.

It is a strategically significant tool that enhances competitiveness through analytical understanding of user feedback.
